

City of Charlottesville Street Network Condition Summary				
Pavement Condition Index (PCI)	Work Type	Projected Rehabilitation Action	Current Status	
			# of Streets	% of Total
Good (PCI = 86-100)	Rejuvenation	Little or no maintenance E.g. Crack Seal, Reclimite, fog seal	175	25.7%
Satisfactory (PCI = 71-85)	Global	Routine Maintenance E.g. Seals such as slurry seal	146	21.4%
Fair (PCI = 56-70)	Critical	Non-structural overlay, cape seal	159	23.3%
Poor (PCI = 41-55)	Conventional	Structural overlay Overlay, Mill and overlay	131	19.2%
Very Poor (PCI = 26-40)	Conventional	Structural Overlay Overlay, Mill and overlay	60	8.8%
Serious (PCI = 11-25)	Reconstruction	Reconstruction, rebuild, full depth reclamation	9	1.3%
Failed (PCI = 0-10)	Reconstruction	Reconstruction, rebuild, full depth reclamation	2	0.3%

# City of Charlottesville, VA 2019 Pavement Condition Index

Weighted Average PCI: **68.75**

PCI	
	Good (86-100)
	Satisfactory (71-85)
	Fair (56-70)
	Poor (41-55)
	Very Poor (26-40)
	Serious (11-25)
	Failed (0-10)

# Charlottesville, VA 2019 Pavement Management System Report

## 1.0 Project Introduction

The nation's highways represent an investment of billions of dollars by local, state and federal governments. For Charlottesville, who maintains 159.91 miles of paved roadways, this investment translates into roughly \$249.46M when factoring in a replacement (reconstruction) cost of approximately \$1.56 million per mile. The \$1.56 million per mile is a national estimate obtained from the American Public Works Association (APWA). This report will only address the needs for the asphalt roads.

<b>Total Pavement Network Value (\$)</b>	<b>\$249.46 Million</b>
<b>Total Distress Value/" Fix" Everything (\$)</b> <b><u>All Asphalt Roads</u></b> <b>Total</b>	<b>\$22,014,612</b>

To protect this investment, Charlottesville hired Transmap Corporation to assist in the development of a Network Pavement Management System. This program is designed to preserve and extend the useful life of paved surfaces throughout the City and optimize the available funds to meet the network condition needs. With careful planning and diligent effort, highest performance standards could be maintained while reducing the overall long-term costs of managing the network pavement system.

## 1.1 Principles of Pavement Management

Given the persistent shortage of funds for maintaining these street systems, the preservation and stewardship of existing roads have become major activities for all levels of government. An excellent way of maximizing the return on investment for the money that exists for road maintenance is to implement a Pavement Management System.

Pavement management is a systematic approach to extending the life of a pavement network. More specifically, it is the process of planning, budgeting, funding, designing, constructing, monitoring, evaluating, maintaining, and rehabilitating the pavement network to provide maximum benefits with available funds.

A Pavement Management System provides tools and methods for finding and implementing the best Maintenance & Rehabilitation (M&R) strategies. Repairing streets when they are still in fair condition ultimately costs less over their lifetime than waiting to fix roads that have fallen into poor condition. In other words, the proactive approach of routine pavement management means less money wasted on frequent roadway reconstruction, and a potential savings of millions of dollars.

This process is illustrated in **Figure 1-1**. It details how timely intervention can delay the inevitable total reconstruction for as long as practical. If repairs are delayed until a road is rated in "Fair" condition or worse, the cost of rehabilitation becomes 4 to 5 times more expensive than for those roads in "Good" condition. This means without preventive maintenance; the cost of rehabilitation will be prohibitively expensive.

A Pavement Management System provides a way to store an accurate inventory of all roadways, enriched with links to easements, as-built records, and historical documentation. The breadth and depth of information they hold, including digital images of roadways, baseline pavement condition data, and reviews of deterioration over time, are invaluable resources for measuring and tracking the effectiveness of Maintenance and Rehabilitation strategies.

Figure 1-1 - Pavement Life Cycle Curve

Successful Pavement Management System programs let agency decision makers develop reliable performance models for the roadway, which can be used to generate sound policies and long-term rehabilitation strategies, budgets, and timetables.

Another compelling reason for implementing a Pavement Management System is the Governmental Accounting Standards Board (GASB) Statement 34. This regulation requires agencies that collect taxes for managing a long-term, fixed infrastructure asset to either:

- **Option #1** - Implement financial accounting controls to effectively depreciate and plan for the replacement of fixed assets; or,
- **Option #2** - Implement an asset management system that provides a mechanism to gauge and budget for the long-term rehabilitation and/or maintenance of assets.

This study completed on the City's roadway network can be used as the basis for achieving GASB 34\*\* compliance, either as the foundation for the inventory and valuation of the network (Option #1), or as the foundation of an asset management system (Option #2).

\*\* Although it is not required to meet GASB 34 standards, it is recommended to follow the industry's best practices with regards to monitoring their infrastructure.

# 1.2 The Pavement Management Process

Figure 1-2 depicts the three unique, but equally important, steps that comprise the Pavement Management Process.

Figure 1-2 - The Pavement Management Process

## 1. System Configuration

System configuration involves identifying all roadways of the project network and assigning them a unique identifier. Each section has attributes such as physical characteristics (length, width, etc.), pavement type, and road classification. As part of system configuration, the network is linked to a GIS map.

## 2. Field Data Collection or Field Surveys

After system configuration is completed, every roadway in the system is surveyed and its condition assessed using the following criteria:

### Surface Distress

Using high definition digital images, technicians evaluate the distress of the roadways they travel on. They record pavement conditions such as cracking, potholes, and raveling, all of which are examples of surface distress.

Pavement distresses recorded during this survey are itemized in **Table 1.1**, with respect to the pavement type (AC=Asphalt Pavement and PCC=Portland Cement Concrete).

**Table 1.1 - Description of Surface Distresses Recorded by Transmap**

**Pavement Distress for Asphalt Pavement**

<b>Alligator Cracking</b> <b>Block Cracking</b> <b>Bleeding</b> <b>Edge Cracking</b> <b>Transverse and Longitudinal Cracking</b>	<b>Patching and Utility Cut Patching</b> <b>Potholes</b> <b>Rutting</b> <b>Weathering</b> <b>Raveling</b> <b>Bumps and Sags, Corrugations and Depressions</b>
--	--

**Pavement Distress for Concrete Pavement**

<b>Divided Slabs</b> <b>Linear Cracking</b> <b>Corner Breaks</b> <b>Durability ("D") Cracking</b> <b>Faulting</b> <b>Joint Seal Damage</b>	<b>Pop Outs</b> <b>Pumping</b> <b>Scaling or Map Cracking</b> <b>Shrinkage Cracking</b> <b>Corner or Joint Spalling</b> <b>Small or Large Patching</b>
---	---

Detailed descriptions of pavement distress and severity can be found in ASTM D6433-11.

**Severity**

Once a distress has been identified, its severity (Low, Moderate, High) is attached to the appropriate record and its count (e.g. number of potholes), square footage (area covered by cracking), and linear feet (length of a specific crack) are added, as well.

In a Network Level PMS, a survey of a limited number of sample units per section is sufficient. A sample area is defined as an area of 2,500 square feet plus or minus 1,000. A section is viewed as the smallest measuring unit when considering the application and selection of Maintenance and Repair (M&R) treatments. All field survey data is collected in samples and summarized on a section by section basis. Each section constitutes a unit of data to populate the Pavement Management System.

Other data collected during field surveys include the pavement width, the pavement type, GPS coordinates, and digital images.

Transmap collected Charlottesville's data using GPS and high definition digital images for each road section.

### **3. Analysis and Reporting**

The results of a Pavement Management System analysis provide a quantitative performance score called the Pavement Condition Index (PCI).

Pavement Condition Index (PCI) is an engineering term representing the surface condition of the pavement on a scale of 0 to 100. For example:

- PCI of 100 is a pavement in perfect condition
- PCI of 0 is a pavement that is failed

The PCI is a distress-based condition index, i.e., specific distresses in the pavement are identified and tallied, and the type, severity, and extent of each distress are used to calculate a single number representing the pavement condition. The higher numbers reflect better pavement. The formula used to calculate the PCIs is shown in Appendix B.

All condition ratings of the field surveys are captured at sample areas and combined to calculate one value, which represents the PCI of a pavement section using the area weighted average.

### 1.3 Understanding the Pavement Condition Index

The following illustration (**Figure 1-3**) shows how the Pavement Condition Index (PCI) deteriorates over time for 3 different types of roadways. It also compares the PCIs to commonly used descriptive terms (Good, Satisfactory, Fair, Poor, Very Poor, Serious, Failed). The divisions between the descriptive terms are not fixed but are meant to indicate common perceptions of roadway condition.

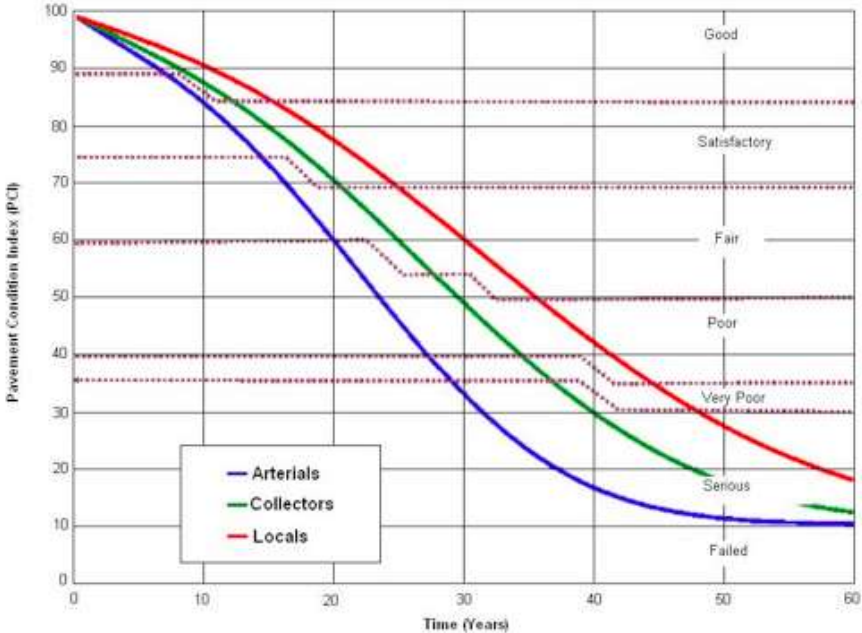

Figure 1-3 - Understanding the Pavement Condition Index Score

Table 1.2 shows typical PCI condition ranges, the work type, and possible rehabilitation options.

Table 1.2 - Typical PCI Condition Ranges

PCI Range	Work Type	Rehabilitation Options
86-100 Good	Rejuvenation	Little or no maintenance E.g. Crack Seal, Reclimite, fog seal
71-85 Satisfactory	Global	Routine Maintenance E.g. Seals such as slurry seal
56-70 Fair	Critical	Non-structural overlay, cape seal
41-55 Poor	Conventional	Structural overlay Overlay, Mill and overlay
26-40 Very Poor	Conventional	Structural Overlay Overlay, Mill and overlay
11-25 Serious	Reconstruction	Reconstruction, rebuild, full depth reclamation
0-10 Failed	Reconstruction	Reconstruction, rebuild, full depth reclamation

## 2.0 Maintenance and Rehabilitation Planning

### 2.1 Key Analysis Inputs

All Pavement Management Systems require user inputs to establish budget estimates and pavement Maintenance & Rehabilitation (M&R) plans. During the Boot Camp, decisions were made that affected the pavement rehabilitation program in a variety of ways. Please see the Boot Camp Meeting Notes for details.

### 2.2 Pavement Preservation

Figure 2-1 represents the American Public Works Association (APWA) industry standard pavement preservation curve.

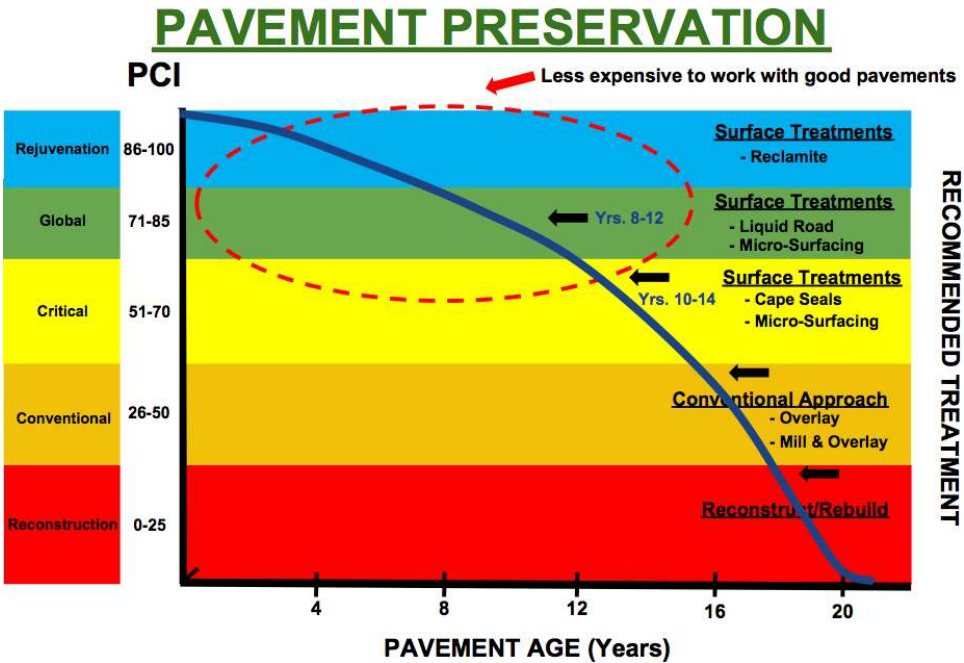

Figure 2-1 Pavement Preservation

**Figure 2-2** represents APWA's Pavement Toolbox. This toolbox looks at possible preservation treatments and how they are cost effective to use, as opposed to spending all funding on worst-first maintenance (rehabilitation/reconstruction).

**Figure 2-2 Preservation Treatments**

This hierarchical strategy ensures that roadways slated for reconstruction remain in the reconstruction pipeline, even if there's a funding shortfall. Available funds are used to preserve those streets that can be treated with surface treatments and overlays. No real equity is lost when those roads become unacceptable for use, since they were already scheduled for reconstruction.

## 2.3 Paved Network Present Conditions & Findings

### Pavement Sections Investigated for Charlottesville

Charlottesville has approximately 159.91 miles of roads. The table below shows the distribution by pavement type for the number of miles, the number of square yards and the weighted average Pavement Condition Index (PCI).

**Table 2.1 – Summary by Surface Type for Roads**

Pavement Type	# of Sections	# of Miles	# of Square Yards	% by # of Square Yards	Weighted Average PCI
Asphalt	682	159.91	2,748,282	100%	69
<b>Total</b>	<b>682</b>	<b>159.91</b>	<b>2,748,282</b>	<b>100%</b>	<b>69</b>

### Pavement Sections Investigated for Charlottesville

Charlottesville has approximately 159.91 miles of asphalt roads. The table below shows the mileage distribution of asphalt pavement by Functional Classification detailing the number of sections, the number of miles, the number of square yards, and the weighted average Pavement Condition Index (PCI).

**Table 2.2 - Distribution of Asphalt Roads by Functional Class**

Functional Classification	# of Sections	# of Miles	# of Square Yards	% by # of Square Yards	Weighted Average PCI
Residential	682	159.91	2,748,282	100%	69

### 3.0 Asphalt (AC) Roads

Pavements are grouped into “families” for further analysis using the MicroPAVER software. Pavements are grouped together for different reasons such as similar construction, similar traffic loads or similar funding categories. The asphalt (AC) pavement network for Charlottesville will be evaluated as one network.

Using data from similar communities and general performance curves, Transmap developed one pavement performance curve for all asphalt pavements as shown in Appendix A.

### 3.1 Estimated Costs for Maintenance and Repair (M&R) Categories for Asphalt roads

#### Asphalt M&R Category Matrix

The unit prices for Maintenance and Repair (M&R) treatments were obtained from the boot camp meeting on Sept. 19, 2019. Transmap translated the information and placed it into the M&R Category ranges and unit prices shown in **Table 3.1**. The column titled “Expected Result” reflects the extended life of the pavement as experienced by Charlottesville.

**Table 3.1 - 2019 Unit Costs by M&R Category for All Asphalt Roads**

M&R Category	M&R Treatment	Price per Square Yard	Expected Result
Crack Seal (PCI 71-100)	Crack Seal	\$1.00	3-year stabilization
Conventional (PCI 21-70)	2.0 -inch Mill & Overlay	\$14.00	15-years (PCI Reset to 100)
Reclamation (PCI 0-20)	Full Depth Reclamation	\$65.00	20-years (PCI Reset to 100)

The values shown in table 3.1 have been updated to reflect the City of Charlottesville’s unit costs for various M&R Treatments. Please refer to the M&R Treatment and Unit Costs, which will be used in the remainder of the report.

**Table 3.2 - 2019 Cost for Repair by M&R Category for All Asphalt Roads**

<b>PCI Range</b>	<b># of Sections</b>	<b># of Miles</b>	<b># of SY</b>	<b>Unit Cost per SY</b>	<b>Total Cost</b>
<b>Crack Seal (PCI 71-100)</b>	321	79.48	1,375,943	\$1.00	\$1,375,943
<b>Conventional (PCI 21-70)</b>	353	78.64	1,344,381	\$14.00	\$18,821,334
<b>Reconstruction (PCI 0-20)</b>	8	1.79	27,959	\$65.00	\$1,817,335
<b>Total</b>	<b>682</b>	<b>159.91</b>	<b>2,748,283</b>		<b>\$22,014,612</b>

**September 24, 2019 Boot Camp Meeting Notes:**

- Chris Crocker discussed the elements of the ArcGIS Online Site.
- There is one network including all roads, Chris needs to check if he has functional/funding classifications in existing GIS data and, if so, integrate into section data.
- Using the centerline provided by the city there are four layers: pavement centerline, panoramic viewer, crack intelligence, and rut depth.
- Chris discussed the project viewer, Pavement Data Viewer, and the van images.
- Discussed the Laser Crack Measurement System (LCMS) features and capabilities. Can be thought of as a Crack Heat Map. Cracks are categorized by width. Discussed meaning of true length (road surface length vs. map line length) Chris will provide link to attendees.
- Discussed the Crack Intel Map Layer. Ranking from 0 to 8 using the total crack count.
- The rut depths (mm) are grouped into four (4) categories and then extrapolated and input into MicroPAVER.
- LCMS - Mr. SID files are included on the hard drive provided to the city.
- Chris updated the staff regarding Transmap standard project deliverables: PCI Map (Average Network PCI=69), Branch Report by unique ID's, Section Report by unique section ID's, and the Distress Report. TransMap's section ID's are acceptable to city.
- There is one M&R Treatment cost matrix.
- City wide priority with no special zones, districts or neighborhoods. Transmap will verify if the functional class are in the centerline file provided by the city.
- City provided Transmap with five (5) years of construction work history that will be included in the MicroPAVER database. Additional construction work history (10 years) will also be made available on spreadsheets.

**Table 3.3 MicroPAVER Input Parameters**

<b>Item</b>	<b>Status</b>
Construction History	The city provided us with five (5) years of construction work history which was included in the database, but will provide 10 more plus work plan up to July 1, 2020
Format of Construction History Data	Additional work history data will be sent to Tmap in spreadsheets.
Number of Families	One (1) family
M&R Category by PCI Ranges	See matrix- City staff will define later
Critical PCI Between PCI of 55 and 70. (Recommend PCI=55)	Critical PCI=55
M&R Treatments (See Matrix)	See Matrix-City staff will define later
Unit Cost (Per Square Yard)	See matrix-City staff will define later
Current Budget	Between \$1.2M and \$1.5M Annually. Believes \$2M is needed.
Given Budget for Major	n/a
Given Budget for Global	n/a
Global PCI Ranges	n/a
Global Life Expectancy	n/a
Start Date for Work Plans	July 1, 2020
Number of Years for Work Plan (Planning Horizon)	5 years
Recommended Budget Scenarios: <ul style="list-style-type: none"> <li>• Do Nothing Budget</li> <li>• Budget to Maintain the Existing PCI – Using Given Budget for Major M&amp;R Treatments</li> <li>• Given Budget what will be the resultant PCI</li> </ul>	Recommended Budget Scenarios: <ul style="list-style-type: none"> <li>• Do Nothing Budget</li> <li>• Budget to Maintain the Existing PCI – Using Major M&amp;R Treatments</li> <li>• Input a given total budget of \$1.5M and \$2.0M and determine the average network PCI along with the deferred maintenance.</li> <li>• Budget to achieve PCI of 71 – Using Major M&amp;R Treatments</li> <li>• City to provide increasing budget numbers over 5-year period.</li> </ul>

## 4.0 Asphalt Network Budget Scenarios

The budget scenarios were completed using MicroPAVER software, version 7.0.10. Charlottesville’s pavement performance model was developed by Transmap using historical data and trends. The performance model is shown in Appendix A.

### 4.1 All Asphalt Roads

**Table 4.1 - Do Nothing Budget**

**All Asphalt Roads**

**Showing the Resulting PCI and Deferred Maintenance**

Year Beginning July 1, 2020	Annual Budget	PCI at Year End	Deferred Maint.
2019	\$0.00	65	\$25.1M
2020	\$0.00	63	\$27.6M
2021	\$0.00	60	\$30.0M
2022	\$0.00	58	\$32.7M
2023	\$0.00	56	\$35.1M

**Figure 4.1 All AC Roads – Do Nothing Consequences**

**Table 4.2 – Recommended \$2.3M Annual Budget to Maintain the Current PCI  
All AC Roads - Major M&R Treatments Only**

Year Beginning July 1, 2020	Annual Budget	PCI at Year End	Deferred Maint.
2019	\$2.3M	68	\$22.8M
2020	\$2.3M	68	\$22.9M
2021	\$2.3M	68	\$22.9M
2022	\$2.3M	68	\$23.0M
2023	\$2.3M	68	\$22.9M

**Figure 4.2 All AC Roads - \$2.3M Annual Budget to Maintain Current PCI**

The recommended MicroPAVER Five-Year Work Plan details are shown in Appendix C. The actual spreadsheet is attached to the transmittal e-mail. Each row represents the work year for each branch and section, section ID termini, including a cost estimate. All the recommendations are for Major M&R Treatments which resets the PCI to 100.

**Table 4.3 – Given \$1.5M Annual Budget  
Determine PCI and Deferred Maintenance  
All AC Roads - Major M&R Treatments Only**

Year Beginning July 1, 2020	Annual Budget	PCI at Year End	Deferred Maint.
2020	\$1.5M	65	\$23.6M
2021	\$1.5M	65	\$24.5M
2022	\$1.5M	64	\$25.4M
2023	\$1.5M	63	\$26.4M
2024	\$1.5M	62	\$27.1M

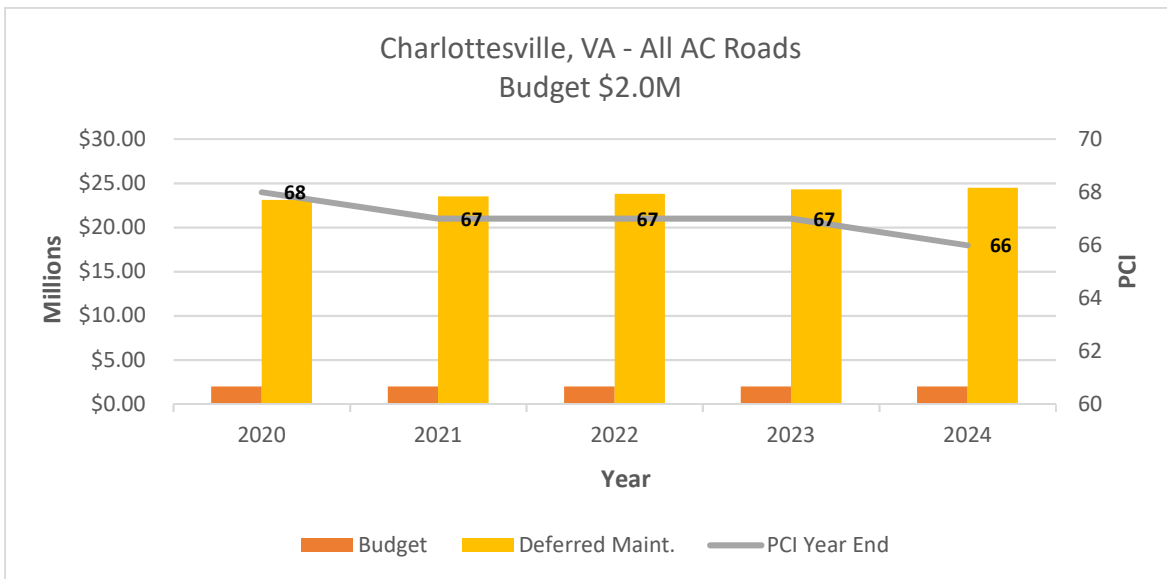

**Figure 4.3 All AC Roads - \$1.5 Annual Budget Consequences**

**Table 4.4 – Given \$2.0M Annual Budget  
Determine PCI and Deferred Maintenance  
All AC Roads - Major M&R Treatments Only**

Year Beginning July 1, 2020	Annual Budget	PCI at Year End	Deferred Maint.
2020	\$2.0M	68	\$23.1M
2021	\$2.0M	67	\$23.5M
2022	\$2.0M	67	\$23.8M
2023	\$2.0M	67	\$24.3M
2024	\$2.0M	66	\$24.5M

**Figure 4.4 All AC Roads - \$2.0 Annual Budget Consequences**

**Table 4.5 – Annual Budget Required to Achieve a Target PCI=71 in 5-Years**

**All AC Roads - Major M&R Treatments Only**

<b>Year Beginning July 1, 2020</b>	<b>Annual Budget</b>	<b>PCI at Year End</b>	<b>Deferred Maint.</b>
<b>2019</b>	\$2.6M	69	\$21.8M
<b>2020</b>	\$2.6M	70	\$20.8M
<b>2021</b>	\$2.6M	71	\$19.7M
<b>2022</b>	\$2.6M	71	\$18.7M
<b>2023</b>	\$2.6M	71	\$17.4M

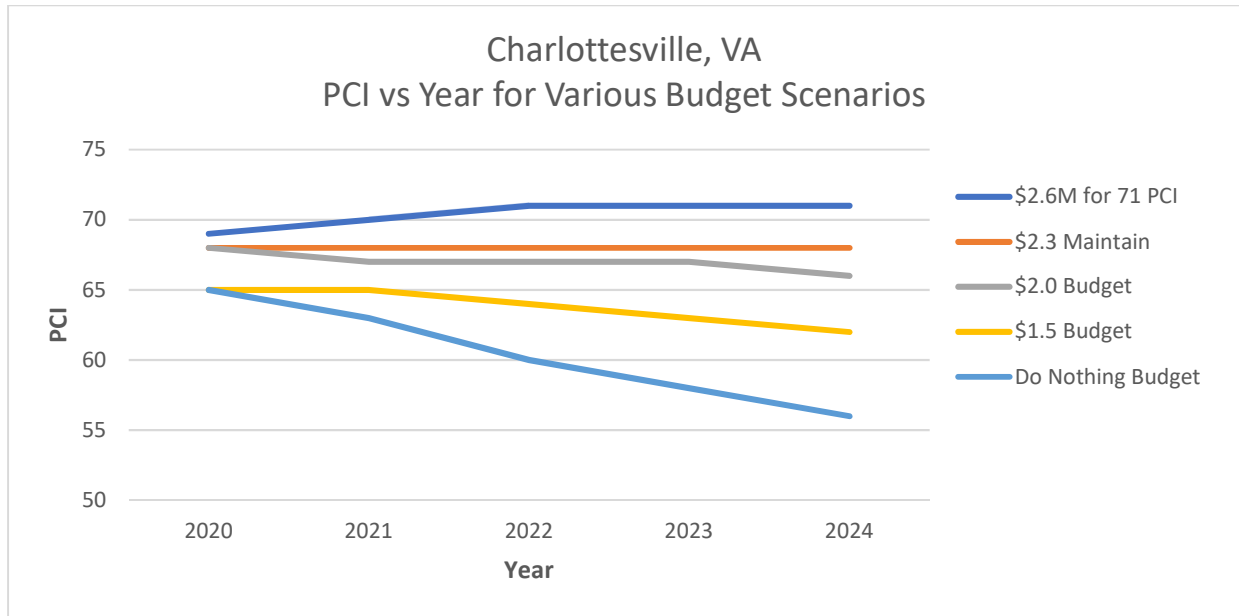

**Figure 4.5 All AC Roads – \$2.6 Annual Budget to Achieve PCI of 71**

## 5.0 Summary for All Asphalt Roads

The recommended annual budget of \$2.3M would maintain the average network PCI of 68 over the 5-year planning horizon. An increase of the annual budget to \$2.6M will increase the PCI to a 71 over a 5-year planning horizon. However, given a \$1.5M annual budget allows the PCI to drop one point per year.

**Figure 5.1 -All AC Roads - PCI vs. Year for Various Budgets**

It has been Transmap's pleasure to work with the City of Charlottesville staff to begin the development of a Pavement Management System. We are certain that the information provided is useful in keeping the network in optimum condition given budget constraints.

The City of Charlottesville staff should be able to see dramatic and sustained improvement in the condition of its street network, concurrent with its use of regular pavement condition surveys. The system enables the staff to forecast future needs, conduct research that contributes to improved pavement performance, and maximize pavement investments by objectively prioritizing roadway preservation and improvement projects.

In addition, the Pavement Management System provides a rational basis for communicating with the internal and external customers about stewardship of the City's infrastructure. The staff has the tools to blend reliable data for use in their analysis and to foster two-way communication of the results with decision makers.

# Appendix A

## Charlottesville, VA

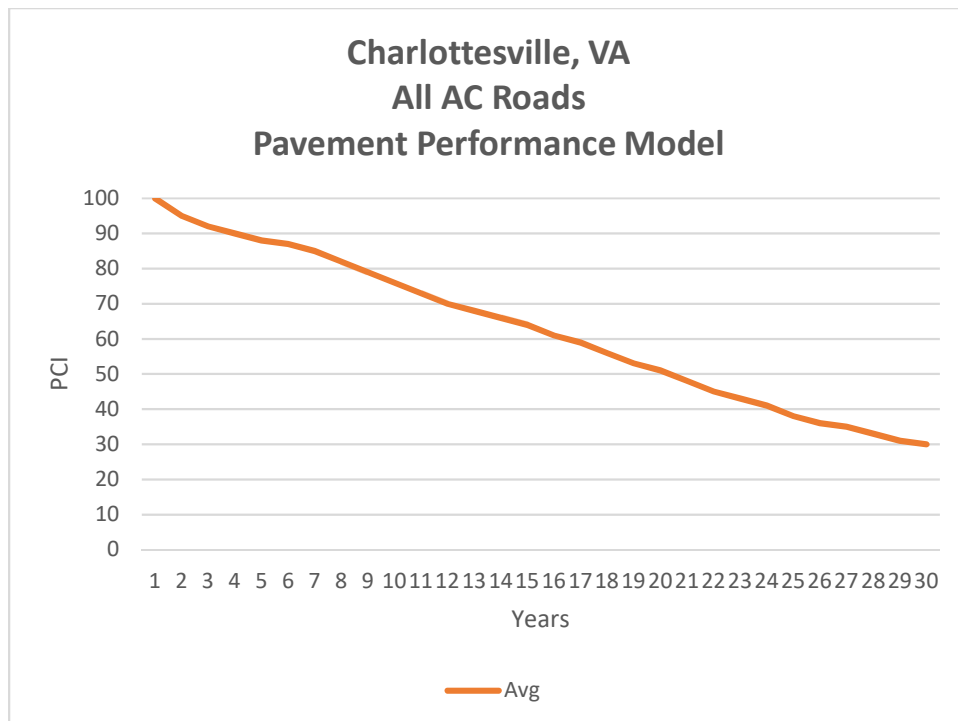

### Asphalt Pavement Performance Curve

The predictive modeling used in the MicroPAVER (PAVER) software groups pavements of similar construction that are subjected to similar traffic loads, weather, and other factors that affect pavement life. The historical data on pavement condition can be used to build a model, which can predict the future performance of a group of pavements with similar attributes. In PAVER, this model of a pavement’s life is referred to as a “family”.

The performance curve plays an important role in the development of network level budget analysis. If the deterioration rate of the curve is too steep, the recommended budget to repair these pavements will increase. If the deterioration rate of the curve is too flat, the recommended budget to repair these pavements will be too small. Both situations are erroneous.

The model shown below was developed using the best available information at the time. As additional field data is added from future surveys, the model will be updated which will increase its accuracy.

**Figure A-1** shows the results for the residential asphalt performance model.

**Figure A-1 – All Asphalt Pavement Performance Model**

## Appendix B

### Pavement Condition Index (PCI) Formula

**Step 1:** In a Network Level PMS, a survey of a limited number of sample units per section is sufficient. A sample area is defined as an area of 2,500 square feet, plus or minus 1,000. A section is viewed as the smallest measuring unit when considering the application and selection of Maintenance and Repair (M&R) treatments.

$$PCI_s = PCI_r = \frac{\sum_{i=1}^R PCI_{ri} \times A_{ri}}{\sum_{i=1}^R A_{ri}}$$

Where

$PCI_s$  = PCI of a pavement section

$PCI_r$  = area weighted average PCI of random (or representative) sample units

$PCI_{ri}$  = PCI of random sample unit number  $i$

$A_{ri}$  = area of the random sample unit  $i$

$R$  = total number of inspected random sample units

**Step 2:** If additional sample units are inspected, they can be used to enhance the section PCI as follows:

$$PCI_a = \frac{\sum_{i=1}^A (PCI_{ai} \times A_{ai})}{\sum_{i=1}^A A_{ai}}$$

$$PCI_s = \frac{PCI_r(A_s - \sum_{i=1}^A A_{ai}) + PCI_a \times \sum_{i=1}^A A_{ai}}{A_s}$$

$PCI_a$  = area weighted average PCI of additional sample units

$PCI_{ai}$  = PCI of additional sample unit number  $i$

$A_{ai}$  = area of additional sample unit  $i$

$A_s$  = total section area

**Step 3:** Using customer defined constraints, such as the desired level of service, available rehabilitation technologies, or budgets, paving plans are developed in the Pavement Management System.

## Appendix C

### Work Plan for \$2.3M Annual Budget to Maintain the Current PCI
